

DZ Dražice opens PV division and presents hybrid solar storage

DZ Dražice opens PV division and presents hybrid solar storage

(ČIA) DZ Dražice opens a new DZ Solar division for photovoltaic (PV) solutions. It thus responds to the growing interest in renewable sources and the significant rise in energy prices. Thanks to its strategic cooperation with Solax, it now provides a comprehensive product portfolio that will enable the implementation of sustainable and energy self-sufficient housing. The company will present a new division on the occasion of the international trade fair Aquatherm 2022. Here it will also present other innovations: the NIBE S2125 air-to-water heat pump or the Slunečnice hybrid solar storage. The heat pump belongs to the NIBE S series, which should provide better connectivity and integration into the smart home and simplification of remote management of individual products and their accessories.
